

Here is a quick solution for installing Scupper Buddies on Perko valve due to the space requirement for installation.

The standard valve is typically installed as follows:

We recommend the solution below for using Scupper Buddies on the Perko #3065DP is to install an additional spacer ring as follows:

Since we have not found a way to purchase an additional spacer ring by itself, the most economical method we recommend is to purchase a Sea Dog #520500-1 or SeaChoice #18261 and use the ring and flapper valve provided. This method provides not only the needed spacer ring for one installation BUT, an additional spacer ring can be made by cutting/removing the flap out of the flapper valve, thus creating the additional spacer ring for a second installation.
